

## **2019 – Automotive Technology**

Hunter Sasse: I chose Auto because I just really like working on cars, and I've done it for a long time, and it seemed like a fun class to be a part of, so that's where I went. Rodney Scriptor: Favorite part of the auto- motive program is being able to break up the day and go out and work on the cars, and then come back in, and we kind of regroup at the end, you know; what we finished; what we can do better; and it's OK to make some mistakes. You're able to learn from it and incorporate it so you don't make the same mistake twice. Hunter Sasse: We start out with just basic learning your tools and what the main parts are. You learn all about the oil and everything, how that works; you do breaks; you do suspension; steering; we get into a little bit of engine stuff; there's a lot of electrical. Our lab is really impressive. We've got a ton of lifts, we have a DYNO; there's just so much money in there and stuff gets added all the time. Rodney Scriptor: And we're always innovating here, there's always new things coming about. Hunter Sasse: My instructors are probably some of my favorite teachers I've ever had. We have several certifications that you get to have; there's just a lot of skills that you learn through there that you didn't even know you didn't have. Rodney Scriptor: And these skills that we learn here, not only in fixing a car but we get you prepared for job interviews, college applications and job applications, and just the necessary skills you need once you graduate high school, whether you do this as a career or not.
